

Rosgal Ltd. - Carbon Reduction Policy

ROSGAL WILL
BE CARBON
NEUTRAL BY
2030

At Rosgal, we take sustainability extremely seriously and we are 100% committed towards minimising the impact which our business practices have on the wider environment.

The civil engineering sector has a significant environmental footprint and, as such, we will do more to tackle the global challenge of climate change.

We have endeavored to put the principles of sustainability into practice through our Carbon Reduction Policy. Through our accredited ISO:14001 2015 Environment Management System, we revise and update our Carbon Reduction Policy on an annual basis.

Our aim is to be carbon neutral by 2030 which is 20 years earlier than the national target of 2050. This will require a reduction in carbon emissions by around 11% each year.

We share our knowledge of carbon accounting, reporting and management across our business to deliver best practices for everyone.

We are investing in technological innovations and working with local supply chains to reduce our carbon emissions and promote long term sustainability. We advise, support and guide our clients, stakeholders, partners and workforce to reduce their carbon footprint.

Our performance is monitored every 6 months and reported to our Managing Director, Garry O'Neill.

Our comprehensive carbon reduction methods are embedded within our 'Sustainability Strategy'.

We act upon the many reports which have outlined the challenges of climate change.

To support our carbon neutral aim, we will:

- ✓ Achieve the targets set down in the **Government's Carbon Neutral Plan** and adhere to the **2008 Climate Change Act**.
- ✓ Implement the **2050 Pathways Analysis** into our work practices which outlines what the UK will need to change in order to reduce the country's greenhouse gas emissions by 2050.
- ✓ We will contribute towards the **UK's Net Zero Target** which aims to reduce net greenhouse gas emissions by 78% by 2035 compared to their 1990 levels.

We will use the methods set out in our 'Sustainability Strategy' to drive towards net zero.

- ✓ We will provide **local people** with **sustainable carbon reduction methods** and equipment.
- ✓ We will **implement and promote** our **carbon reduction methods** amongst our employees, clients, stakeholders and supply chains.
- ✓ We will adopt more **sustainable and environmentally friendly work practices**.
